Summary

Computer Science and Statistical Data Science double major with hands-on analytics experience at a Fortune 500 insurer, turning warehouse data into decision-ready insights for business stakeholders. Strong in SQL, Python, and data communication, with a foundation in machine learning and a record of leading teams to end-to-end solutions.

Education

University of Connecticut Storrs, CT
B.S. in Computer Science
B.S. in Statistical Data Science May 2027

- GPA: 3.84/4.0 — 4x College of Engineering Dean's List
- Relevant Courses: Data Science and Engineering, Applied Linear Regression, Data Ethics, Statistical Methods

Technical Skills

- **Languages:** Python, SQL, R, C, C++, JavaScript
- **Frameworks/Tools:** Flask, Git, Jupyter, Tableau, Excel, Teradata, VS Code, Claude
- **Data Science:** Data Wrangling, EDA, Visualization, Statistical Modeling, Feature Engineering, Data Lineage & Source-to-Target Mapping
- **Machine Learning:** Regression, Classification, Clustering

Experience

The Travelers Companies, Inc. Hartford, CT | Summer 2026
Business Insights & Analytics (BI&A) LDP Intern — Data & Analytics

- Drove the hands-on feasibility analysis for retiring a legacy Teradata profitability data mart, reverse-engineering the lineage of an 83-field fact table and mapping each field against governed sources to determine whether decommissioning was viable.
- Wrote and validated SQL against live data to reproduce the fact table from governed source, reconciling 43 fields to an exact match and confirming a key derivation across 33.8M+ rows.
- Identified that adopting the firm's standardized loss-capping methodology would shift reported financials, quantified the dollar-level impact, and escalated it for business sign-off rather than changing reported outputs unilaterally.
- Analyzed downstream consumer usage and built a red/amber/green readiness framework to prioritize migration and surface blockers for business stakeholders.
- Authored the decommission feasibility brief for data-management leadership and built a Python tool to automate profiling of the underlying datasets.

American Pool Rocky Hill, CT | Summer 2023 & 2024
Lifeguard

- Maintained a 100% safety record while managing 50+ daily guests.
- Responded to emergencies with quick, effective problem-solving under pressure.

Projects

Gym Bro Health App | Simmons University 2025 Hackathon March 2025

- Led a team of 4 to develop a full-stack AI fitness web app using Flask, Google Gemini API, and MongoDB.
- Delivered personalized workout and nutrition plans using user feedback, sentiment, and goals.
- Engineered secure authentication, dynamic dashboards, and adaptive AI-driven health recommendations.

SpaceX Falcon 9 Landing Prediction January 2025

- Collected and structured real SpaceX launch data via REST API calls and web scraping, engineering the features and pipeline for a landing-success prediction model.
- Trained and evaluated classification models (87.5% best accuracy) and deployed interactive results with Plotly Dash and Folium.

Certifications

IBM Data Science Professional Certificate Coursera | Jan 2025

- Completed a 12-course data science sequence covering Python, SQL, machine learning, and data visualization.
